1. Create Project, Package and Class name as Process
2. To remove errors

Project -> build path -> add external archives -> File system -> usr -> lib -> Hadoop -> Hadoop-common jar

Project -> build path -> add external archives -> File system -> usr -> lib -> Hadoop-mapreduce -> Hadoop-core-2.6.0

3. In terminal type the following command

-> hadoop fs -put file_path/Process.txt Process.txt

4. Create jar file

Java file -> export -> jar file -> browse -> Cloudera -> rename to Process.jar -> ok -> finish

5. Go to terminal

-> hadoop jar Process.jar Process.Process Process.txt dir16

-> hadoop fs -cat dir16/part-r-00000
